PROFESSIONAL SUMMARY

Full-stack developer with 2+ years of hands-on experience building web applications using React.js, Next.js, TypeScript, and Node.js. Strong at turning product requirements into clean, responsive UIs and well-structured APIs, and comfortable owning features from implementation through testing, deployment to AWS, and ongoing iteration in Agile teams.

TECHNICAL SKILLS

Frontend: JavaScript ES6+, TypeScript, React.js, Next.js, React Native, HTML5, CSS3, Redux, Context API, Tailwind CSS, Material-UI, Bootstrap

Backend & Cloud: Node.js, Express.js, RESTful APIs, GraphQL, Firebase, MongoDB, PostgreSQL, AWS (S3, EC2), Prisma ORM

AI & Tools: Prompt engineering for APIs, integrating AI services (OpenAI-style APIs), deploying inference services on AWS, Git, GitHub, Docker, CI/CD, GitHub Actions, Jest, React Testing Library, Webpack, npm, Postman

Practices: Agile, Scrum, mobile-first design, responsive web design, performance optimization, component-based architecture

WORK EXPERIENCE

Full Stack Developer

Mar 2025 – Present

Community of Guardians

Toronto, ON (Remote)

- Improved reliability of a social platform by delivering full-stack features in React.js, Node.js, TypeScript, and Prisma, helping stabilize core user flows used by most active users.
- Reduced deployment friction by introducing GitHub Actions workflows for frontend and backend, cutting manual deployment steps by roughly 30% and making releases more predictable.
- Worked with AWS (S3, EC2) to organize hosting and assets, which helped the team standardize how new features are rolled out and monitored across environments.
- Integrated the Orbit AI chatbot on the landing page to answer common questions and guide first-time users, contributing to a noticeable drop in basic support queries.

React Developer

Oct 2022 – Jan 2024

BrainyBeam Infotech Pvt. Ltd

Ahmedabad, India

- Brought 5+ client products (e-commerce, healthcare, education) onto shared React UI patterns, reducing one-off styling fixes and making designs easier to maintain over time.
- Addressed layout issues on smaller screens by implementing mobile-first responsive designs with CSS Grid and Flexbox, which reduced follow-up layout bug reports from QA.
- Introduced a reusable component library (buttons, forms, layout primitives) that cut duplicated UI code and sped up new page development for subsequent projects.
- Supported a cohort of students and junior developers through regular code reviews and guidance on JavaScript, React, and Git, improving the quality of their production contributions.

PROJECTS

EasyApi: AI-Powered API Generator | Next.js, TypeScript, Node.js, AWS, AI

Dec 2024 – Mar 2025

- Built a Next.js web application that lets users configure and generate REST APIs through an intuitive UI backed by an AI model deployed on AWS.
- Designed a flow where the AI model generates endpoint definitions and schema suggestions, reducing manual boilerplate and setup time for common API patterns.

PawfectMatch: Pet Adoption App | React Native, Redux, Firebase, Twilio

Nov 2023 – Jan 2024

- Built a cross-platform mobile app connecting adopters with shelters, including browsing, favourites, and application flows for available pets.
- Implemented real-time messaging with Twilio and Firebase so adopters and shelters can coordinate directly in the app.

Luxereserve: Vacation Rental Marketplace | React.js, Redux, Node.js, MongoDB, Stripe

Sep 2023 – Oct 2023

- Implemented a full-stack vacation rental platform with property listings, filters, Mapbox-based maps, and a secure booking flow.
- Deployed the application end to end on AWS for production use, handling server setup, environment configuration, and monitoring of the live stack.

EDUCATION

Mobile Application Development – GPA: 4.4/4.5

Centennial College

Sep 2024 – Aug 2025

Toronto, ON

Software Engineering Technician – GPA: 4.27/4.5

Centennial College

Jan 2024 – Aug 2024

Toronto, ON
